DETAILED ACTION

Allowable Subject Matter

1. Claims 1-10 are allowed.
2. The following is an examiner's statement of reasons for allowance:

U. S. Patent No. 6,211,921 to Maris is the reference closest to the claimed invention. Maris et al. disclose a method of evaluating a diffracting structure formed on a semiconductor sample comprising the steps of: including interpolation points and associated theoretical optical response characteristics, each interpolation point corresponding to a sample parameter set and with the associated theoretical optical response characteristics being determined by applying a sample model to each of the parameter; measuring the actual optical response characteristics of the sample; and iteratively interpolating between the interpolation points in order to derive a set of interpolated optical response characteristics that best fit the actual optical response characteristics to evaluate the sample. However, Moris does not teach and iteratively interpolating between the interpolation points using an interpolation model that defines a substantially continuous function which intersects with the interpolation points; and including all of the other limitations in the respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
